

FLUIDYNE'S FLOATING DECANter

Fluidyne's floating decanter removes supernatant off the top of the tanks in various water and wastewater applications. It is ideal for decanting water from lagoons, digesters, equalization basins, aeration basins and SBRs. The decanter is an all hydraulic design. It floats up and down with changing water levels and can remove liquid levels down to a few feet above the tank floor.

FEATURES:

- Simple and safe operation
- Long life cycle with corrosion and abrasion resistant materials
- No submerged valves or seals required
- 180 degrees of travel allows decanting maximum tank volume
- Foam-filled float with ballast allows lowering or raising decanter in water as required
